

SimpliTuner Privacy Policy

SimpliTuner Privacy Policy

Last updated: 2026-07-19

SimpliTuner is a chromatic instrument tuner. This policy explains what data the app collects — which is none.

Data collection

SimpliTuner does not collect, store, or transmit any personal data. The app has no user accounts, no analytics, no advertising, and no third-party SDKs that send data off the device.

Microphone

SimpliTuner uses the device microphone solely to detect the pitch of your instrument while the tuner screen is open. All audio processing happens entirely on-device, in real time. Audio is never recorded, saved to disk, or transmitted anywhere — it exists only as a live signal analyzed in memory and immediately discarded.

Third parties

SimpliTuner does not share data with anyone, because it does not collect any to begin with. There are no third-party analytics, crash-reporting, or advertising services integrated into the app.

Changes to this policy

If this policy changes, the updated version will be posted at this same location with a new “Last updated” date.
